### Angles of Quadrilaterals

Find the indicated measures of each angle for each shape.

1. This is a rectangle.

$\angle 1 = \underline{\hspace{1cm}}^\circ, \angle 2 = \underline{\hspace{1cm}}^\circ, \angle 3 = \underline{\hspace{1cm}}^\circ, \angle 4 = \underline{\hspace{1cm}}^\circ$

2. This is a square.

$\angle 1 = \underline{\hspace{1cm}}^\circ, \angle 2 = \underline{\hspace{1cm}}^\circ, \angle 3 = \underline{\hspace{1cm}}^\circ, \angle 4 = \underline{\hspace{1cm}}^\circ$

3. This is a rhombus

$\angle 1 = \underline{\hspace{1cm}}^\circ, \angle 2 = \underline{\hspace{1cm}}^\circ, \angle 3 = \underline{\hspace{1cm}}^\circ, \angle 4 = \underline{\hspace{1cm}}^\circ$

4. This is a trapezoid.

$\angle 1 = \underline{\hspace{1cm}}^\circ, \angle 2 = \underline{\hspace{1cm}}^\circ, \angle 3 = \underline{\hspace{1cm}}^\circ, \angle 4 = \underline{\hspace{1cm}}^\circ$

5. This is a kite.

$\angle 1 = \underline{\hspace{1cm}}^\circ, \angle 2 = \underline{\hspace{1cm}}^\circ, \angle 3 = \underline{\hspace{1cm}}^\circ, \angle 4 = \underline{\hspace{1cm}}^\circ$
